

Estate Audit — 2026-08-12

Estate Audit — 2026-08-12

Auditor: Claude (standing adviser / orchestrator / verifier role, established 2026-08-12) **Scope:** Google Drive, GitHub, Obsidian, mail/identity, and the research deliverables against Iris's 2026-08-05 requirements. **Method:** direct inspection — byte-level hash and size comparison, git state, filesystem link resolution. No status was taken on trust.

0. Headline

One critical failure was found and fixed during this audit. Google Drive for Desktop had silently reverted **10 of the 16** files in the 2026-08-12 supervisor package to older cloud versions — including **Chapter 3** (the meeting's deliverable) and the **literature workbook**. Had the meeting proceeded without this check, the supervisors would have been shown the previous, uncited Chapter 3 and the old 8-source spreadsheet.

Root cause: a plain copy into `G:\` loses to Google Drive's conflict resolution when a file of the same name already exists in the cloud — the cloud copy wins and the newer local file is discarded. Files with *new* names (06, 07, 08) survived; every file that already existed was reverted.

Fixed: all files re-published through a new delete-then-copy-then-verify routine (`scripts/publish-and-verify-drive.ps1`) and confirmed byte-identical after a settle delay.

1. Google Drive

1.1 Structure — healthy

Nine-folder canonical structure present and populated: `00_Admin_and_Decisions` (19 files), `01_Research_Questions` (10), `02_PhD_Proposal` (12→18), `03_Literature_Review` (12), `04_SE_Modeling_Studies` (14), `05_Medical_Feasibility_Gated` (19), `06_Weekly_Meetings` (32), `07_Submission_Package` (2, intentionally near-empty), `99_Archive` (2), plus `_Ali private (do not share)` (6).

1.2 Findings

ID	Sev	Finding	State
D-01	CRITICAL	Drive reverted 10/16 package files to older cloud versions — incl. Chapter 3 (44,643 B old vs 52,922 B correct) and the literature workbook (12,536 B old vs	FIXED + verified

		27,023 B correct)	
D-02	HIGH	Canonical topic folders held stale copies: 02_PhD_Proposal had the 08-10 Chapter 3; 03_Literature_Review had the 8-source workbook; 00_Admin had an old tracker	FIXED + verified
D-03	HIGH	Proposal v0.3 was entirely absent from 02_PhD_Proposal — only v0.1 and v0.2 were there, so the canonical proposal folder did not contain the current proposal	FIXED (published as <i>Proposal v0.3 (current)</i>)
D-04	MEDIUM	Two literature spreadsheets now coexist: the native VEGO-AI PhD Literature Workbook v0.1.gsheet (untouched since 07-30) and the new .xlsx . Ambiguous which is authoritative for Iris	OPEN — see plan A2
D-05	MEDIUM	_Ali private (do not share) holds .md files, which Google Drive cannot preview. If they matter, they should be .docx/.pdf ; if internal-only, they are fine as-is	OPEN — low urgency
D-06	INFO	07_Submission_Package is empty except its overview — this is correct by design (stays empty until a submission candidate is approved)	No action
D-07	UNVERIFIABLE	Whether the Drive is actually shared with Iris and Arnon (A08-05) cannot be determined from the filesystem — sharing lives in Drive's ACL	NEEDS ALI

2. GitHub

ID	Sev	Finding	State
G-01	HIGH	13 uncommitted files on main — the entire Aug-12 package work (Chapter 3, workbooks, builders, audit) exists only on local disk. A	OPEN

		disk failure loses it	
G-02	MEDIUM	PR #14 open since 2026-07-26 (~2.5 weeks) — "Publish BigUI experiment evaluation..."	OPEN — decide merge or close
G-03	MEDIUM	Two branches severely divergent: agent/bigui-experiment-platform (ahead 172 / behind 41) and agent/independent-evidence-evaluation (ahead 184 / behind 14). The longer they diverge the harder the merge	OPEN
G-04	LOW	Local-only branches never pushed: docs/iris-july29-phd-execution , feature/human-feedback-manager , feature/m4a-test-compat — unbacked-up work	OPEN
G-05	INFO	main is level with origin (0 unpushed commits); PR #9 (July-01 redirect package) is no longer open — merged or closed	No action

3. Obsidian

ID	Sev	Finding	State
O-01	MEDIUM-HIGH	The vault lives at C:\Users\ahamed\OneDrive - Parallel Wireless\Documents\Obsidian Vault — inside the employer's corporate OneDrive tenant . Anything created directly in the vault syncs to Parallel Wireless. Note: the research content itself is reached through a junction to G:\ , and OneDrive does not follow junctions, so the <i>research files</i> are very likely not uploading — but the vault, its config, and any note authored in place are in the corporate tenant. For a personal PhD this is an IP/ownership question worth settling deliberately	OPEN — decision needed
O-02	LOW	A VEGO-AI PhD entry appeared in one enumeration but no longer resolves (File Not Found) — a stale/dangling link from an earlier	OPEN — remove reference

		layout	
O-03	LOW	Junk files in vault root: Untitled.canvas, Untitled 1.canvas (2 bytes each)	OPEN — delete
O-04	INFO	The live junction VEGO-AI PhD Working 2026 → Drive folder works correctly (12 files visible on both sides) — this is a good setup	No action

4. Mail and identity

ID	Sev	Finding	State
M-01	HIGH (capability gap)	The only connected mail account is `ahamed@parallelwireless.com` (Microsoft 365, "Engineer I, QA"). There is no Gmail/academic mail connected. I therefore <i>cannot</i> see or verify correspondence with Iris and Arnon — including her check-in email (A08-07)	OPEN — needs a decision
M-02	MEDIUM	Consequence: I cannot verify whether Iris's email arrived, nor whether the Drive share notification was sent. These stay NEEDS ALI in every report until an academic mailbox is connected	OPEN
M-03	NOTE	Using a corporate mailbox for PhD supervision correspondence carries the same IP/retention question as O-01	OPEN

5. Research deliverables vs Iris's 2026-08-05 requirements

Req	What Iris asked	Verdict	Evidence
E15.1	Gap + RQ chapter in full	DONE	~5,200 words, 66 citation markers, on Drive verified at 52,922 B
E15.2	Per-RQ literature spreadsheet with RQ tag column	DONE	40 verified sources, 4 sheets, coverage-gap analysis; 27,023 B verified
E15.3	<i>Think about §2 and §4, do not start</i>	DONE (correctly not started)	4 §2 options, 9 §4 options, 14 questions; no design committed

E15.4	Share the Drive with Iris and Arnon	NOT VERIFIABLE — NEEDS ALI	ACL not inspectable from disk
E15.5	Word proposal + separate tracking doc	DONE	v0.3 .docx + 6-sheet tracker, both on Drive
E15.6	Reply to her check-in email	NEEDS ALI	No mail visibility (M-01)
E15.7	Present live on Aug 12	READY	10-slide deck + walkthrough + Q&A
A08-01	Verify final RQ wording vs saved draft	BLOCKING — NEEDS ALI	Two discrepancies surfaced: E6 exploration vs identification/classification; E8 human vs expert judgment
E5,E6,E7,E8,E9,E10,E12,E13	Wording/structure corrections	APPLIED	Each traced in the tracking workbook
E14	3-month blocks, 3-year horizon	NOT STARTED (correct)	Belongs to the Plan chapter, not this cycle

6. Standing evidence gates — unchanged

Gate	Value	Blocks
EXP-005 generalization-safe expert labels	0 of 24 (≥20 needed)	every quantitative accuracy claim
Medical entry gates G1–G6	0 of 6	any medical data processing
Literature searches QL-01...QL-05	not run	any novelty/completeness statement
Accuracy / generalization / clinical claims	none made	— verified by automated guard, 18/18 PASS

7. What I could NOT verify (stated honestly)

1. **Drive sharing status** — requires the Drive UI or API; not inspectable from the filesystem.
2. **Any email** — no academic mailbox connected (M-01).
3. **Whether the supervisors have opened anything** — no telemetry, by design.
4. **The exact agreed RQ wording** — only Ali's saved working draft can settle it (A08-01).
5. **Cloud-side Drive state** beyond what the local client exposes; the client is the only window, and

D-01 proves it can disagree with the cloud.

Audit performed 2026-08-12. Every "FIXED" above was re-verified by byte comparison after a settle delay. Every "OPEN" item appears in the plan with an owner.
