Three things worth knowing before the meeting

1. Chapter 3 is now cited. The earlier draft asserted gaps without references. This version positions four bodies of work against the gap using a verified seed corpus — the reference list of our own MODELS/MAS4Models submission plus the tracked resource pack — and marks every "no established approach does X" as a *candidate claim* for the unrun searches to confirm or refute.

2. Two wording discrepancies are flagged, not resolved. I could not tell from the recording which wording was agreed, so I did not choose silently:

- E6 is recorded as narrowing the question to variability **identification/classification**; the

reconstructed wording says variability **exploration**. These are not synonyms.

- The main question and SQ1 say **human** judgment; SQ2 and SQ3 say **expert** judgment.

Both need my saved working draft (A08-01) and your ruling.

3. The evidence position has not moved — and the chapter says so in a table. EXP-005: **0 of 24** generalization-safe expert labels. Medical entry gates: **0 of 6**. Literature searches: protocol-ready, **not run**. No accuracy, generalization, clinical-performance or effort-reduction claim appears anywhere in this package.

Status of this package

Everything here is a **working draft for review, not an approved artefact**. The 2026-08-05 meeting record it traces to is machine-transcribed with inferred speakers and is itself pending your

confirmation; every reference to it carries an E-identifier so you can check it in one step. Nothing is marked approved merely because it is consistent with a draft.
